

# Health

**Sanghamitra Samanta**

Guest Lecturer

Department of Humanities and Social Science,  
National Institute of Technology, Goa  
Cuncolim, South Goa, Goa-403703

# Health

- The World Health Organization (WHO) defines health as a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity.
- Explanation: The World Health Organization (WHO) says that health means being completely well in your body, mind, and social life, not just being free from illness or problems. So, it's about feeling good all around, not just avoiding sickness.

# Signs of Good Health

1. Absence of the diseases
2. Normalcy of voice and complexion
3. Proper nourishment of body
4. Good strength
5. Desire for food
6. Relish at meal time
7. Proper and timely digestion of the ingested food
8. Timely sleep
9. Non-appearance of abnormal dreams
10. Easy awakening
11. Easy elimination of urine and feces
12. Overall normalcy sense organs of mind, intellect and associated with no other unhealthy features.

# Healthy Lifestyle

- ❖ A healthy lifestyle includes:
  - ✓ Eating well: Eat a variety of fruits and vegetables, whole grains, and healthy fats. Limit saturated fat, cholesterol, sugar, salt, and total fat.
  - ✓ Being active: Get at least 30 minutes of moderate to vigorous physical activity most days of the week. This can include walking, dancing, yoga, running, or sports.
  - ✓ Getting enough sleep: The American Heart Association recommends 7-9 hours of sleep per night.
  - ✓ Managing stress: Practice mindfulness and find ways to manage stress.
  - ✓ Protecting your skin: Avoid long periods of sun exposure and use sunscreen and long-sleeved clothing when you are outside.
  - ✓ Limiting alcohol: Drink in moderation, and never drink before or while driving, or when pregnant.
  - ✓ Connecting with others: Enjoy regular family meals, and surround yourself with positive and encouraging people.
  - ✓ Keeping up with health appointments: Get regular health appointments, testing, screenings, and vaccinations.
  - ✓ Avoiding illegal drugs: Avoid illegal drugs or using prescription drugs in ways other than prescribed.
- Maintaining a healthy weight: A healthy body mass index (BMI) is between 18.5 and 24.9

# Circadian Rhythm

- ❖ Circadian rhythm is the natural 24-hour cycle of physical, mental, and behavioral changes that the body goes through. It's controlled by a biological clock in the brain, and is mostly affected by light and darkness.
- ❖ Circadian rhythms affect many important functions in the body, including: Sleep patterns, Hormone release, Appetite and digestion, and Temperature.
- ❖ The body has several internal clocks, called circadian clocks, that are in sync with environmental cues like light and darkness. The central circadian clock is located in the brain, and other circadian clocks are in organs throughout the body.
- ❖ Circadian rhythms help the body adapt to changes in the environment, such as radiation, temperature, and food availability. However, abnormal circadian rhythms can be linked to a number of health conditions, including:
  - Obesity
  - Diabetes
  - Depression
  - Bipolar disorder
  - Seasonal affective disorder
  - Sleep disorders such as insomnia

❖ Some tips for resetting your circadian rhythm include:

- Adhering to a routine each day
- Getting enough daily exercise
- Sleeping in an environment that promotes rest
- Avoiding alcohol, caffeine, and nicotine in the evenings
- Powering down your screens well before bedtime
- Not napping late in the afternoon or evening

# Types of Circadian Rhythm Disorders

- Jet lag disorder. You've recently traveled to a different time zone, which takes you out of sync with the day/night schedule you're used to.
- Shift work sleep disorder (SWSD). You have trouble adjusting your circadian rhythm to your work schedule. You're more prone to this if you work night shifts.
- Delayed sleep-wake phase disorder (DSWPD). Your sleep/wake schedule is much later than the average person. It's more common in children and teenagers.
- Advanced sleep-wake phase disorder (ASWPD). You go to bed earlier and wake earlier than the average person.
- Irregular sleep-wake rhythm disorder (ISWRD). Your sleep and wake times happen at unpredictable, disorganized intervals. This usually happens to people with dementia or other degenerative brain diseases.
- Non-24-hour sleep-wake rhythm disorder (N24SWD). Your circadian rhythm is predictable, but it isn't 24 hours like most people's. It's usually longer, but it could be shorter.

# Early Awakening

- ❖ Early awakening can be caused by a number of factors, including age, hormones, health problems, and circumstantial issues:
  - ✓ Age: Early awakening is more prevalent in males at most ages, and increases with age in people with endogenous depression.
  - ✓ Hormonal shifts: Hormonal changes can contribute to early awakening.
  - ✓ Health problems: Some health problems that can cause early awakening include acid reflux, thyroid dysfunction, stomach pain, chronic pain, and depression.
  - ✓ Circumstantial issues: Pregnancy can also cause early awakening.
- ❖ To help you wake up earlier, you can try these tips:
  - ✓ Sleep schedule: Go to bed and wake up at the same time every day, including on days off. Aim to get 7–9 hours of sleep per night.
  - ✓ Light: Expose yourself to bright light in the morning, either by waking up to a timed light or moving your bed so you can see the morning sun.
  - ✓ Exercise: Exercise in the morning to boost your mood and energy, and shift your sleep schedule earlier. Avoid vigorous workouts close to bedtime.
  - ✓ Diet: Eat your last large meal 2–3 hours before bed, and limit caffeine and nicotine. Choose foods rich in tryptophan, magnesium, and melatonin, like bananas, almonds, and cherries.
  - ✓ Screen time: Limit screen time, especially before bed. The blue light emitted by screens can make it harder to fall asleep. Evening routine: Create a relaxing evening routine.
  - ✓ Incentives: Create an incentive to get out of bed, like promising yourself a treat.

# Dantadhavana-(Brushing teeth)

- Dantadhavana-(Brushing teeth)

- 1) Clean the teeth with a green twig having a crushed end
- 2) Astringent, pungent, or bitter tastes are used
- 3) Brushing should be done in the morning and after meals

Advantages of brushing with sticks:

- i) Prevents disorders of teeth and gums
- ii) Makes teeth and gums strong
- iii) Cleans tongue and oral cavity
- iv) Induces taste in food

# Nasya-Putting oil in nose

- Nasya-Putting oil in nose

## Advantages:

- 1) Eyesight, smell, and hearing remains unimpaired
- 2) Prevents hair fall and greying of hair and beard
- 3) Promotes hair growth
- 4) Diseases like torticollis (twisting and pain in neck), head-ache, facial paralysis, lock-jaw, rhinitis, hemicrania and tremors of the head will be alleviated
- 5) It nourishes the blood vessels, joints, ligaments and tendons of cranium, giving them greater strength.
- 6) Face becomes cheerful and plump
- 7) Voice becomes mellow, firm and stentorian
- 8) All the senses become clearer and strengthened
- 9) Diseases related to head and neck prevented even in aging

# Gandusha-Holding oil in mouth

- Gandusha-Holding oil in mouth

Advantages:

- 1) Imparts strength to the jaws, strength to the voice
- 2) Provides plumpness to the face
- 3) Excellent gustatory sensation and good taste for food
- 4) Prevents dryness of the throat and lips.
- 5) Prevents teeth caries
- 6) Teeth and gums become strong

# Abhyanga-Oil Massage

- Oil Massage-

- 1) Head Massage:
- 2) Prevents head-ache, premature graying, and alopecia
- 3) Strengthens the cranial bones significantly
- 4) Hair roots become stronger
- 5) Senses become clearer
- 6) Facial skin becomes smoother
- 7) The person gets sound sleep and happiness

# Body Massage

- Body Massage:
  - 1) The skin becomes beautiful
  - 2) Vata disorders are relieved
  - 3) Tolerance to hardship and physical strain is enhanced
  - 4) Effects of injury due to external trauma or strenuous physical exertion are minimized
  - 5) A person, by applying daily oil massage, becomes smooth and plump, strong and good looking
  - 6) Aging process slows down

# Foot Massage

- c) Foot Massage:
  - 1) The roughness, stiffness, dryness, fatigue and numbness of feet are alleviated
  - 2) The legs attain gentleness, strength, firmness
  - 3) Eyes attain brightness, and the vata is pacified
  - 4) Prevents diseases like grudhrasi (sciatica), fissures in the feet, contraction of the muscles, and blood vessels of legs

# Benefits of exercise

- Benefits of exercise-

- 1)Lightness, strength to work, stability
- 2)Physical as well as mental strength is increased
- 3)Endurance towards distress
- 4)Mitigation of dosha (especially kapha)
- 5)Stimulation of Agni (digestive power)
- 6)Personality and confidence is improved

# Benefits of Udwartana(dry powder massage)

- Benefits of Udwartana(dry powder massage)-

- 1) Reduces Kapha Dosha
- 2) Reduces Meda(fats)
- 3) Provides stability to the body
- 4) Skin health is improved

# Snana (bath)

- Snana (bath) and its benefits-

- 1) Wiping of body removes body feter, heaviness, fatigue, itching, dirt, anorexia and loathsomeness due to sweating.
- 2) Bathing is purifying, promotive of virility and longevity
- 3) Removes fatigue, sweat and dirt, brings about physical strength
- 4) Enhances ojas to the highest degree
- 5) Cleanses and exfoliates toxins and dead skin cells from the skin surface

# Concept of Prakriti

- Concept of Prakriti: This is constitution comprises of both “physical body” as well as “mental body” Prakriti means “nature” or natural constitution of the human body.  
\* "Pra' means the 'beginning' or 'source of origin' and 'kriti' means 'to form'. Put together Prakriti means 'natural form' or in beginning which is formed. Prakriti means manifestation of special characteristics due to predominance of Doshas-Vata, Pitta and Kapha when body is formed & in this Prakriti indicates predominance of specific Dosha in a human being which remains life long. There are other factors which also determine the constitution of a body in minor way.\* By knowing Prakriti, we can know dominance of Doshas in our body so that possibility of diseases related to that Doshas, we can come to know and accordingly diet, regimen and some Rasayanas or medicine suitable can also be taken. To avoid such type of diseases precautions also may be taken with advise of Ayurvedic consultant. At the time of selection of occupation also Prakriti testing helps. It helps while treating patients. Type of Prakriti changes according to dominance of Doshas.eg. Vata Prakriti, Pitta Prakriti Kapha Prakriti Sama prakriti ( All three Doshas are in equal proportions.). Vata - Pitta Prakriti Pitta -Kapha Prakriti Kapha-Pitta Prakriti, etc.

# Aayurveda Aayu

- Five categories of matter Originated from Five Mahabhootas or five basic elements
  - i) Prithvi- the principle which provides material form, mass, shape and size
  - ii) Apa- the principle which glues the objects
  - iii) Agni-the principle which performs transformations
  - iv) Vayu-the principle which governs all movements
  - v) Akasha-the principle which provides space for configuration

# Doshas

- Three Doshas- the body constituents which control and regulate body functions
  - i) Vata Controls and regulates all the movements
  - ii) Pitta All constituents required for biochemical conversions, regulates metabolism
  - iii) Kapha Constituents which govern new formations, growth, development and stability

# Dhatu

- Seven Dhatu - The most important body tissues
  - i) Rasa-Plasma, lymph, nutrients for all tissues
  - ii) Rakta-Blood tissue
  - iii) Mamsa-Muscle tissue
  - iv) Meda-adipose tissue
  - v) Asthi-(Osseous Tissue) Bones
  - vi) Majja-bone marrow, brain and nervous tissue
  - vii) Shukra - Ovum reproductive system, semen

# Doshas

Doshas are three fundamental categories in Ayurveda, India's traditional medical system, that are said to determine a person's health, personality, and mind-body type:

## Vata

Associated with air and space, Vata dosha controls movement, breathing, blood circulation, and more. People with Vata dosha may be creative, have a lean build, and be sensitive to wind.

## Pitta

Associated with fire and water, Pitta dosha controls metabolism, digestion, and body temperature. People with Pitta dosha may be competitive, goal-oriented, and have a strong desire for success.

## Kapha

Associated with earth and water, Kapha dosha controls growth, structure, and provides water to the body.

Each person is a unique blend of the three doshas, but most people tend to lean towards one or two. The ratio of doshas in a person's constitution is said to determine their physiological and psychological characteristics.

# Vata Prakriti

- Characteristics of Vata Prakriti person Body Structure –
- low weight, thin body, short height, dry and low-density hair.
- A crack sound occurs when walking.
- They have cold intolerance.
- They do things in a quick and stumbling way.
- These Prakriti people talk a lot.
- They are hyperactive; their body constantly stays in motion.
- They show regular facial expressions.
- They have a throaty voice.
- They easily get anxious and emotional, but get back to their normal state immediately.
- They learn things quickly but forget them at the same speed. Short-memory people.

# Pitta Prakriti

- Characteristics of Pitta Prakriti person. Body Structure –
- High body temperature.
- They sweat a lot and can't tolerate heat.
- They have soft skin and hair.
- They also have a natural brownish color hair.
- These Prakriti people have a high chance of getting blackheads and moles.
- They also have a high chance of getting grey hair or bald head at a very young age.
- Naturally, pitta Prakriti has a great appetite. They tend to eat and drink as much as required.
- They are also food lovers.
- Pitta Prakriti faces difficulties in sleeping.
- They have a low-adjusting nature.
- Pitta prakriti people are sensitive too.
- These Prakriti people are sharp and confident. They also appear in the same way.

# Kapha Prakriti

- Characteristics of Kapha Prakriti person Body Structure –
- They have a body with broad shoulders.
- Their skin appears soft and wet with smooth hair.
- They have a soft and thin voice.
- They have strong joints with large muscle mass.
- These Prakritis are slow workers.
- They even eat food slowly.
- They have firm commitments to finishing a task even if it goes beyond the deadline.
- They speak less.
- Naturally, they have low appetite, low body temperature, and hence sweat less.
- They are slow but have good memory power.
- Kapha Prakriti is always found with a sweet gesture.

# Ideal Diet

- An ideal diet includes a variety of foods, such as vegetables, fruits, whole grains, lean proteins, and healthy fats:
- Vegetables-A healthy diet should include three to five servings of vegetables per day. Whole vegetables are better than juices because they contain fiber, which is good for digestion.
- Whole grains-Whole grains can help maintain a healthy weight and reduce the risk of cardiovascular disease, type 2 diabetes, and bowel cancer.
- Fruits-Fruits are a key component of a balanced diet because they are rich in fiber, vitamins, minerals, and antioxidants.
- Fish-Fish is a lean protein that is a great food to eat before working out.
- Legumes-Legumes are high in protein and fiber, and contain antioxidants and vital minerals and nutrients like folate, iron, and magnesium.
- Nuts-Nuts are high in protein, fiber, and healthy fats. Different types of nuts have different nutritional benefits.
- Eggs-Eggs are a great source of protein and heart-healthy fats.
- Protein-Protein can help you gain strength, improve bone health, and build muscle. It also enhances your metabolic rate, which means you burn calories faster.

# Fast Food

- Effects of fast food on health:
- Fast food impacts blood sugar and blood pressure, increases inflammation, and may mean an individual does not eat enough necessary nutrients. In the long term, a diet rich in fast food could lead to issues with digestion, immunity, inflammation, heart health, obesity, and more.

# Jaggery and Sugar

- ❖ Jaggery and sugar are both sweeteners, but they differ in their origin, texture, and nutritional content:
- ✓ Origin-Jaggery is made from sugarcane or palm sap that's been evaporated and solidified. Sugar is made from sugarcane or sugar beets that have been processed into white crystals.
- ✓ Texture-Jaggery is a semisolid mass with a thick, crumbly texture. Sugar has a granular texture and dissolves easily in liquids.
- ✓ Nutritional content-Jaggery contains more nutrients than sugar because it's less refined and retains some molasses, a nutritious by-product of sugar production. Jaggery is high in minerals and vitamins, including iron, magnesium, potassium, and manganese.
- ✓ Taste-Jaggery has a sweet, winy fragrance and a taste similar to brown sugar or molasses. Sugar has no specific taste other than being sweet.
- ✓ Health-Some say jaggery is healthier than other sugars, and it's often used as a sugar substitute. However, jaggery is high in calories, so it should be consumed in moderation. People with diabetes should avoid both jaggery and sugar.

# Non-Veg Diet

- A non-vegetarian diet includes meat, fish, and poultry, which are complete proteins that provide essential amino acids, iron, zinc, vitamin B12, and omega-3 fatty acids. These nutrients can help with: muscle development, immune function, body repair, energy metabolism, cognitive function, and cardiovascular health.
- However, non-vegetarian foods can also be high in saturated fats and cholesterol, which can increase the risk of heart disease and other cardiovascular issues. The production of meat can also have significant environmental consequences, such as deforestation, greenhouse gas emissions, and water consumption.
- Here's an example of a non-vegetarian diet chart:
- Breakfast: Toast, 3 egg whites, 1 yolk, and veggies
- Mid morning: Fruits and nuts
- Lunch: Salad, roti or rice, sabji, and chicken
- Evening: Sprouts, chicken salad, or chicken roti roll
- Dinner: Soup, salad, and fish or chicken
- If you're trying to lose weight, you can try:
- Removing fat from meat
- Being mindful of how the meat is prepared
- Considering the type of meat you're eating

# Cooked/Processed Food

- Cooking food is a type of processing, so all cooked foods are processed foods:
- Processed foods: Foods that have been changed from their natural state, such as by cooking, canning, freezing, packaging, or adding preservatives, nutrients, flavors, salts, sugars, or fats.
- Minimally processed foods: Foods that are prepared in advance for convenience, such as bagged spinach, cut vegetables, and roasted nuts.
- Foods with less processing: Foods that are processed at their peak to lock in nutritional quality and freshness, such as canned tomatoes, frozen fruits and vegetables, and canned tuna.
- Foods with added ingredients: Foods that have ingredients added for flavor and texture, such as pasta sauce, yogurt, and cake mixes.
- Ready-to-eat foods: Foods that are more heavily processed, such as crackers, cereal, and deli meat.
- To reduce your consumption of processed foods, you can:
- Avoid foods with additives and preservatives, such as high fructose corn syrup, hydrogenated oils, and food dyes.
- Cut back on ultra-processed foods.
- Look for more natural ingredients.
- Watch for hidden sugars, fats, and salt on nutrition facts labels.
- Consider cereals that contain no added sugar and have undergone minimal processing.

# GI Motility Disorders

- A gastrointestinal (GI) motility disorder is a digestive condition that occurs when the muscles or nerves of the gut are not working properly. This can cause abnormal contractions or increased sensitivity, which can affect how food moves through the digestive system.
- Symptoms of a GI motility disorder can include:
  - Abdominal pain or swelling
  - Difficulty swallowing
  - Regurgitation
  - Heartburn or GERD
  - Diarrhea
  - Constipation
  - Nausea
  - Weight loss

- GI motility disorders can occur anywhere in the digestive tract, from the esophagus to the rectum. Some disorders affect only one part of the digestive tract, while others affect multiple areas.
- GI motility disorders can be caused by:
  - A problem with the muscles that control peristalsis
  - A problem with the nerves or hormones that govern the muscular contractions
  - Chronic inflammation or an infection in the GI tract
- Some examples of GI motility disorders include:
  - Cyclic vomiting syndrome (CVS)
  - Intestinal dysmotility
  - Intestinal pseudo-obstruction
  - Small bowel bacterial overgrowth
  - Hirschsprung's disease
  - Eosinophilic Esophagitis (EoE)

# Timings Of Food

- Lunch should be about four to five hours after breakfast. For example, if you ate breakfast at 7 am, eat lunch between 11 am and noon.

# Ahara Vidhi

- Eat food after washing hands
- Sit at clean hygienic place with all required items
- Food should be fresh and warm
- Medium speed of eating
- Do not speak while eating
- concentrate on eating
- keep in mind which food item is beneficial for him
- Increase in dosha Timing:
- Kapha Dosha: after sunrise in the starting of the day.
- Pitta Dosha: afternoon
- Vaat Dosha: end of the day

# Rutus

- There are 6 Rutus.\*
- Hemanta- Kartika-Margashirsha, November - December \*
- Shishir Pousha- MaghaJanuary - February \*
- Vasanta Falgun - Chaitra March - April \*
- GrishmaVaishakha-Jyeshtha May- June \*
- VarshaAshadh- ShravanJuly- August \*
- Sharad Bhadrapad - AshwinSeptember - October \*
- Seasonal regimen in sharad rutu.\*
- This rutu Mark's the Bhadrapad and Ashwin indian months and September & October English months.\*
- Pitta Dosha is predominant in this rutu.\*
- Pitta accumulated during rains gets vitiated by sharp rays of sun causing various pitta dosha related diseases.

# Diet For Sharad Ritu

- Madhura( sweet), tikta( bitter) and kashaya( astringent) rasa containing food should be consumed.\*
- Eat only when hungry.\*
- Diet for sharad ritu
- Madhura( sweet), tikta( bitter) and kashaya( astringent) rasa containing food should be consumed.\*
- Eat only when hungry.\*
- Rice, wheat , barley, Ragi, pearl millet ( Jowar) preparations are good.\*
- Moong,(green gram), moong dal, Masoor , Lentil), masoor dal, Toor dal can be consumed.\*
- Vegetables - Pumpkin, Lauki (bottle gourd), Snake gourd, Bitter gourd, Ridge gourd, Cabbage , Cauliflower, Spinach, Amaranths, Beetroot, cucumber , etc. are beneficial. \*
- Fruits like pomegranate, coconut, amla( Indian gooseberry), bananas, chikku, pear, Sitaphal, guava, apples, grapes(sweet) , ash gourd, resins, currents( dried black grapes )are beneficial. \*
- Cow milk, kheer, ghee, butter are especially recommended in this season as they pacify pitta dosha.\*
- sugar candy, honey can be consumed. Less spice should be consumed. Coriander, Cumin, cinnamon, Turmeric Elaichi can be used.\* Drink boiled but cooled to normal temperature water.
- Avoid\*
- Katu (spicy), Lavana( salty) & amla( sour) rasa.\*
- Deep fried items, spicy items, sour - yogurt, curd , pickle, tamrind, etc • Red chillies, mustard oil, , ginger, garlic, fenugreek seeds, groundnuts.\*
- Fermented food and stale food.

# Sharad Ritu Lifestyle

- Sharad ritu Lifestyle:\*
- Rub the body with paste of chandan (sandal wood powder), camphor, turmeric etc.
- wear light and loose cotton clothes for coolant effect on body
- Sleeping during daytime should be avoided
- Avoid going in hot sun.
- Light walk in moonlight
- Swimming, yoga asanas, meditation
- Panchakarma like Virechan and Raktamokshan beneficial to detox body(should be done only after consulting Ayurvedic physicians)
- Grishma Rutucharya
- dry winds and hot penetrating sun rays
- dry up the environment, take away the cooling properties of the earth.
- body's strength & digestive strength less.
- Pitta and Vata increases
- Kapha Dosh pacifies.

- Grishma Rutu Diet:
- madhura rasa (sweet), sheeta(cold) in potency and snigdha (creamy)
- Coolants like amra(mango), ushir, kamal(lotus), kokam chandan can be used as sharbat.
- Tender coconut water
- Fruits- pomegranate, amla, mango, grapes, coconut, Banana, water melon, Musk melon,
- Jack fruit, Custard apple, grapes, Orange etc and their juices milk, ghee, butter, shrikhand, icecream
- Water kept in earthen pot by adding flowers
- Vegetables- Onion, cabbage, leafy vegetables, Cucumber, Beetroot, all types of gourds.
- Diet to be avoided:
- Salty, sour and spicy and oily pickle,
- Chicken Alcoholic beverages, tea, coffee.
- Grishma rutu Lifestyle: Do's:\*
- Use soothing perfumes/aroma like sandalwood for mental relaxation from heat.
- Wear thin and light cotton clothes.
- Take a short afternoon nap.
- Cleaning of teeth with astringent power
- Nasya, Gandusha with milk massage with coconut oil mild exercises, yogasana, swimming, meditation

# Sadvritta

- Sadvritta (codes of good conduct):
- worship God, elders, highly accomplished persons & teachers
- bathe twice a day, clean his excretory passages and feet frequently
- Cutting of hair, shaving & nail cutting thrice a fortnight
- wear uniform clothes
- cheerful, use flowers and fragrance
- gentle attire and style of hair as commonly in practice.
- apply oil to head, ear, nose, and feet daily.\*
- offer hospitality to guests.
- speak useful, measured, sweet & meaningful words.
- self controlled & virtuous
- devoted to the cause but not be anxious about the result
- free from anxiety, fearless, shy (from committing bad deeds)wise, highly enthusiastic, skillful, religious, positive attitude\*
- not tell lies, not take other's possessions\*

- not have desire for other's property\*
- not indulge in enmity, sinful acts, or be vicious (even to a sinner)not point out defects of others
- not try to know other's secrets.\*not keep company of the unvirtuous, insane persons
- not ride on defective vehicles
- Not sit on hard place of knee height
- Not sleep on uncovered hard bed or having no pillow, having insufficient dimensions or uneven.\*
- not move on uneven tops of the mountains, climb trees, and take dip in water with strongcurrents.
- not move around the place that are prone to fire hazards
- should not laugh loudly,
- Not release flatus with sound
- not yawn, sneeze, or laugh with uncovered mouth
- not perform any improper actions of body parts (like bend/twist nose, grind teeth, scratching sounds using nails, strike bones)not stay for long in the temples, sacred places, raised platforms, crossroads, gardens, cremation grounds & places of execution during night
- snot enter a deserted house or forests alone.\*not take refuge of wicked persons and indulge in terrorising acts.

# Social Hygiene

- Social hygiene:
- not litter garbage at public places.\*
- Cover your mouth while laughing, coughing, sneezing, burping or yawning.\*
- Respect the elders, ancestors, teachers, scholars etc.
- Care for old people, women, children, the sick, weak, physically challenged
- Avoid confronting the seniors
- Share achievements with well-wishers
- don't be envious of others
- Don't disclose anyone's secrets in public
- Avoid gossiping, unhealthy criticism, too judgemental
- Speak only when it's your turn, within the context and possibly the truth.\*
- Allow others to express.
- Avoid lies, anger, extreme grief, jealousy, greed
- not maintain the company of ill-mannered people or people with evil thoughts

# Vega

- Vega (Natural urges)-Auto-regulated system of body cleanses out metabolic waste products through various
- channels and maintains equilibrium in the body.
- systematic natural mechanism
- should not be suppressed to maintain health.
- if voluntarily suppressed for prolonged period, metabolic toxins are accumulated in the body systems leading to various diseases and local obstructed pathologies.

# Natural Urges

- Diseases due to suppression of urge of
  1. Micturition(Urine)-pain in the bladder and phallus- dysuria, headache-distension of the lower abdomen
  2. Defecate(faeces or undigested food)colic pain-headache cramps in the calf muscles-distension of abdomen.
  3. Pass flatulence(gas in the intestine or fart).
- ❖ Retention of faeces, urine and flatus-
  - distension of abdomen, fatigue and other abdominal disease
- 4. sneezing
- Neck stiffness
- Headache
- facial paralysis,
- pain in half side of face and head,
- weakness of sense organs and locomotor organs

# Good Conduct Rules

- Good conduct rules for government servants include:
- Integrity: Maintain absolute integrity and devotion to duty.
- Honesty: Maintain high ethical standards and honesty.
- Political neutrality: Maintain political neutrality.
- Fairness: Promote the principles of merit, fairness, and impartiality.
- Accountability: Maintain accountability and transparency.
- Responsiveness: Be responsive to the public.
- Supervisory responsibility: Ensure the integrity and devotion to duty of government servants under your control.
- Official dealings: Observe proper procedure in official dealings with members of parliament and state legislatures.
- Communication: Do not communicate official documents or classified information to unauthorized people.
- Strikes: Do not join or support illegal strikes.
- Dowry: Do not give or take dowry, or demand it directly or indirectly.
- Address higher authority: Do not address higher authority prematurely unless it is necessary.
- Employment: Do not use your official position or influence to secure employment for your family.

# Improvement Of Concentration

- Exercise: Regular exercise increases blood flow to the brain, which provides it with oxygen and nutrients.
- Sleep: Aim to get at least six hours of sleep per night, but seven or eight hours is preferred.
- Reduce multitasking: Focus on one task at a time and give it your full attention.
- Take a break: Taking a break from work or homework can help improve concentration.
- Eliminate distractions: Remove things in your surroundings that might cause interruptions.
- Set goals: Set reasonable time limits for completing tasks.
- Listen to music: Light music, classical music, and nature sounds can help you concentrate.
- Meditate: Start your morning with a meditation session to calm your thoughts and prepare for the day.

# Circadian Rhythm Related To Digestion

- Circadian rhythms regulate digestive processes: The digestive system's cells, organs, and tissues exhibit circadian rhythms, which are variations in cell proliferation, function, and structure that occur throughout the day. The circadian clock coordinates the activity of many tissues that are required for digestion and metabolism.
- Circadian rhythms are influenced by feeding and light: Light and feeding cycles synchronize the circadian clock with the environment. For example, the liver's clock gene expression rhythms can be reset by changing feeding schedules.
- Circadian rhythm disruption can lead to digestive issues: Disruptions to circadian rhythms can lead to digestive issues like irritable bowel syndrome (IBS), inflammatory bowel disease (IBD), and digestive cancers. For example, sleep disturbances can worsen symptoms of ulcerative colitis (UC).
- Sleep is important for digestion: Poor sleep can negatively impact gut health. Sleep disturbances are common in IBS, affecting 26% to 55% of patients.

Thank You
